# SAWN TIMBER

# ST

The spruce, which is insensitive to cold, is an essential Alpine tree, and the ideal construction material. It is felled, cut, trimmed, debarked and measured, and then cut in our sawmill into square timber, slats, or narrow / wide / prismatic sawn wood. We meet individual customer needs in the shortest possible time, and to the expected quality.

# SAWN TIMBER

Sawn timber is shaped round timber. Fine-grained Alpine spruce wood is cut parallel to the trunk axis. This, and the careful drying, guarantee wood products of perfect shape for every application. The final inspection is carried out by highly-experienced employees, who sort the sawn timber into quality classes.
